

Gregg Bellofatto || Software Developer

ABOUT ME

After working in the automotive industry for 17 years, a career change is something I wanted. Through networking, a connection planted a seed that I should become a software developer. After researching the industry, I decided it would be a great opportunity. Attending Carolina Code School has now become one of the best decisions I could have made. As a graduate, I look forward to using my newly learned skills to take on challenges as a software developer.

WORK SAMPLES – ON GITHUB
